

**Name:**

Satisfaction index

**Definition:**

It is a qualitative indicator of farmers' perception of working conditions and farm management.

**Calculation method:**

The value of this indicator will be calculated as a summation of the survey scores on the topic:

$$- \text{Indicator} = \sum P_i / N$$

Where:

$P_i$ : Score of each question

$N$ : Number of questions (3)

Questions:

1. Are you satisfied with the management of current practices carried out on the farm? (0 not satisfied, 10 totally satisfied).
2. Do you think these practices could be improved? If so, how? (0 cannot be improved, 10 everything has to be improved).
3. Would you be willing to adopt different management techniques in order to improve sustainability? (0 is not willing to adopt techniques, 10 fully willing to adopt the necessary techniques).

**Interpretation:**

It indicates in a subjective way the mood, the satisfaction and will of the farmer to improve the management of the farm.

**Information source:**

Data obtained through a survey to farmers
